

A Broadridge Company

RFQ+

LTX's patented RFQ+ protocol combines pre-trade dealer selection analytics with liquidity aggregation capabilities to facilitate larger size trades and reduce information leakage.

DEALER SELECTION SCORES: Optimize the number of dealers that you send each RFQ to. Dealer Selection Scores provide data-driven dealer selection assistance based on dealers' real-time and historical Liquidity Cloud® inputs as well as pricing and platform behavior.

- Use data to select the dealers that are most likely to respond to your RFQ
- Optimize the number of dealers that you send each RFQ to
- Leverage sophisticated data science based on:
 - Dealer axes in the Liquidity Cloud (current, historical)
 - Dealer Similar Bond axes in the Liquidity Cloud (current, historical)
 - Dealer price quality (current, historical)
 - Dealer behavior (response rate, quality)

BENEFITS:

- Reduce information leakage
- Execute larger size and/or less liquid trades electronically
- Optimize price by leveraging analysis that includes market levels and dealers' historical pricing
- Benefit from greater likelihood of execution

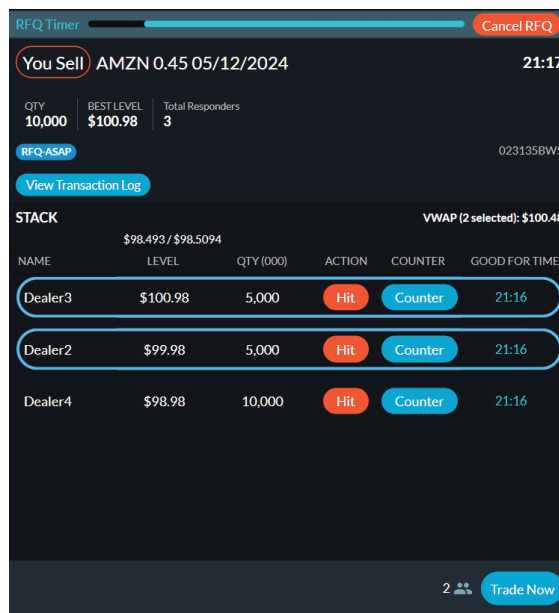

For more information about RFQ+ click here to book a demo.

LIQUIDITY AGGREGATION: Execute larger size trades electronically with the ability for multiple dealer responders to bid/offer for the size they each want.

- Trade one-to-many, not just one-to-one
- Choose to execute at individual prices from different dealers or at the same price with all selected dealers

BENEFITS:

- Get larger size done electronically
- Get natural price improvement - dealers respond in their exact axed amount
- Save time by not having to go out on the same inquiry after getting only partially filled
- Execute more efficiently by keeping your trading on the platform instead of needing to blend phone and e-trading

Patented liquidity aggregation capabilities in an RFQ+
